GUIDE · ORIENTATION EDITION · NOVEMBER 2026

Player Guide: the Sixty Interest Groups

An introduction for prospective players to the electorate: six voter families, sixty publicly described groups, the five axes on which they judge parties, and the wider political currents they overlap with.

GUIDE: THE SIXTY INTEREST GROUPS — DOC-GUIDE-INTEREST-GROUPS

1 Who votes

The world's adult human population — about 9.16 billion people in 2040 — votes in twelve regions for the 600-seat Assembly: 300 constituency seats and 300 global-list seats that bring each party's total close to its share of the world vote (a party needs two per cent to qualify).

The electorate is modelled as **sixty voter groups in six families**. Every family appears in every region, in different proportions. Groups are simulated actors with standing profiles, budgets and consistent histories; they are not invented on the spot to reward or punish anyone.

Almost every voter has a powerful AI adviser. That improves factual understanding but leaves value differences intact — misleading persuasion, unequal access and strategic voting are still real.

2 The five axes

Every group has a position on each axis and gives each axis a different weight. A party is scored by how close it is to a group on the axes that group cares about most.

AXIS	FROM … TO
Allocation	Individual ownership · legislative decision · AI delegation
Timing	Early release · reflection
Franchise	Living adults · broader inclusion
Reach	Preservation · settlement

AXIS	FROM … TO
Prohibitions	Narrow · extensive

3 The six families

Families describe recurring political motivations, not classes of people, and they are **not** the founding parties. A party can draw on several families, and two groups in one family can disagree on nearly every practical bill.

FAMILY	PRINCIPAL TENDENCY	WHAT BINDS IT	WHAT DIVIDES IT
Settlers	Claim, settlement and early action	New frontiers and the benefits of expansion	Speed, territorial priority, acceptable risks and who receives claims
Stewards	Protection and conservation	Protection of places, ecosystems and options	Permanent bans versus limited, carefully monitored settlement
Holders	Individual title and trading	Control over individualised resource claims	Free markets versus family, community and waiting-period restrictions
Builders	Public goods and common projects	Shared projects and pooled investment	Technocratic planning versus participatory control
Inclusionists	Future and digital persons and an enlarged franchise	Recognition of excluded or uncertain interests	Which minds or future persons deserve representation, and on what terms
Deferrers	Delay and delegation for reflection	Avoiding irreversible errors under moral uncertainty	Human deliberation versus delegated AI inquiry and authority

4 Settlers — claim, settlement and early action

Divided over: speed, territorial priority, acceptable risks and who receives claims.

GROUP	PUBLIC AIMS
Frontier Pioneers	Would-be founders of distant autonomous settlements. Demand early site access and meaningful self-government; resist indefinite moratoria.
Probe Lobbyists	Manufacturers, engineers and investors tied to interstellar mission chains. Favour legal certainty for launched missions; can switch parties over compensation and safety standards.
Homestead Migrants	Households seeking independent titles in newly accessible systems. Support individually transferable claims but oppose concentration by incumbent firms.

GROUP	PUBLIC AIMS
Industrial Expanders	Operators and beneficiaries of self-reproducing industrial capacity. Favour early allocation to industrial seeds and infrastructure; resist prohibitions with unclear scope.
Planetary Colonists	People seeking long-duration settlements on planetary surfaces. Demand habitable-site protections, safe terraforming and stable local law.
Risk Acceptors	People who value ambitious experiments and fast exploration. Tolerate higher exploratory risks but object to concealed external harms and coercion.
Legacy Builders	Families and communities seeking projects that last for generations. Support durable endowments and visible works; may back reserves linked to named future beneficiaries.
Claim-First Loyalists	Partisans of early missions and first-possession doctrines. Defend prior claims and could mobilise against retroactive curtailments.
Speed Pragmatists	Supporters of technically feasible, staged expansion. Value deployment schedules and measurable results; abandon slogans unsupported by capacity.
Rapid Distributors	Advocates of putting released claims into use promptly. Support fast releases but split between individual distribution and common development.

5 Stewards — protection and conservation

Divided over: permanent bans versus limited, carefully monitored settlement.

GROUP	PUBLIC AIMS
Preserve Keepers	Administrators and supporters of protected cosmic environments. Want binding sanctuaries and penalties for destruction; insist on clear boundaries.
Near-Space Settlers	People favouring modest exploration near Earth and nearby stars. Accept regulated settlement but oppose distant irreversible commitments.
Wilderness Advocates	Believers in the intrinsic value of unmodified environments. Defend unvisited systems from industrial conversion, even where no human would be harmed.
Ecological Guardians	Researchers and campaigners concerned with alien or emergent ecologies. Require precautionary surveys before engineering potentially living worlds.
Cautious Neighbors	Communities worried that others' expansion imposes shared risks. Prioritise externality controls, consultation and enforceable liability.
Heritage Protectors	Associations defending historic places, artefacts and inherited landscapes. Prefer preservation covenants; object to projects that erase culturally important records.

GROUP	PUBLIC AIMS
Observers' Bloc	Scientists and contemplative groups preferring study before intervention. Support observatories and non-invasive missions; can back long-term restraint.
Minimal-Footprint Colonists	Settlers committed to low-impact human presence. Support habitation where footprints are limited and monitored.
Intergenerational Stewards	Advocates for the option value of untouched resources. Favour reserves and periodic review over irreversible present-day decisions.
Slow Settlers	Advocates of expansion conditional on accumulated knowledge. Can support eventual settlement if scientific triggers and sunset reviews are credible.

6 Holders — individual title and trading

Divided over: free markets versus family, community and waiting-period restrictions.

GROUP	PUBLIC AIMS
Equal-Share Traders	People whose central concern is universal initial ownership. Want equal, enforceable shares; resist privileged allocations to incumbents.
Open-Exchange Holders	Owners who regard liquid trading as essential to autonomy. Oppose transfer restrictions; favour transparent competitive markets.
Kin Holders	Households managing shares through families and descendants. Demand reliable inheritance, guardianship and protection against fraud.
Share Speculators	Investors accepting risk in future resource claims. Favour liquid markets, predictable titles and disclosure; react strongly to retroactive changes.
Community Holders	Cooperatives and local associations pooling individual endowments. Support voluntary collective title; oppose compulsory collectivisation.
Private Ventures	Entrepreneurs combining resource rights with industrial projects. Favour stable contracts and entrepreneurial access over monopoly concessions.
Pledge Givers	People who commit their shares to charitable or moral causes. Demand robust trusts and commitments enforceable beyond a holder's lifetime.
Waiting-Period Holders	Supporters of temporary limits on immediate sale. Favour cooling-off periods and anti-manipulation rules without permanent paternalism.
Anti-Pooling Holders	Critics of compulsory pooled institutions. Resist mandatory trusts and legislative diversion of individual rights.
Direct-Use Holders	People wanting to use their own shares for concrete projects. Want accessible project tools; dislike systems where only large companies can build.

7 Builders — public goods and common projects

Divided over: technocratic planning versus participatory control.

GROUP	PUBLIC AIMS
Public Works Builders	Coalitions favouring shared interstellar infrastructure. Back relays, surveys and common utilities funded through Assembly projects.
Research Funders	Supporters of openly tested science. Want independent verification and publication rather than corporate capture.
Shared-Sky Advocates	People who see cosmic resources as a common inheritance. Favour broad public benefit; disagree on central planning versus community control.
Moral Project Funders	Donors and organisers prioritising ethical objectives. Back projects justified by welfare or rights rather than sheer output.
Long-Term Trustees	Supporters of fiduciary institutions that endure for centuries. Want auditability, trustee-removal rules and protection from political raids.
Civic Councils	Local and regional democratic institutions seeking a role in implementation. Demand participation, fiscal transparency and local autonomy.
Regional Commons	Coalitions worried that powerful regions monopolise common investment. Push geographic fairness across the twelve regions.
Infrastructure Planners	Logistics, energy and engineering communities. Prefer coherent sequences of investment over symbolic announcements.
Mutual Benefit Pools	Associations coordinating cross-group public goods. Support bargains with measurable benefits to several constituencies.
Assembly Loyalists	Voters who identify common projects with parliamentary legitimacy. Defend Assembly authority; oppose informal Council or corporate substitutes.

8 Inclusionists — future and digital persons and an enlarged franchise

Divided over: which minds or future persons deserve representation, and on what terms.

GROUP	PUBLIC AIMS
Later-Generation Advocates	Supporters of political consideration for people not yet born. Demand reserved resources and limits on irreversible depletion.
Digital Rights Advocates	Campaigners for persistent artificial persons. Press for due process, protection from deletion and recognition beyond property law.
Emulation Families	Kin and partners of uploaded or copied persons. Defend continuity of marriage, inheritance and family status across substrates.

GROUP	PUBLIC AIMS
Agent Operators	People responsible for persistent agents. Seek clear duties and safeguards; divided over operators' versus agents' rights.
Youth Cohort	Young and soon-to-be-enfranchised people worried about inherited commitments. Demand generational accountability and ways to revise earlier settlements.
Universal Franchise	Maximal advocates of political inclusion. Support broad voting eligibility but must answer duplication and identity verification.
Sentience Advocates	Campaigners for potentially conscious animals and AIs. Prefer precautionary welfare protection where consciousness is uncertain.
Copy-Limit Reformers	People concerned with the rights and electoral effects of replication. Support limits or safeguards on copying; disagree over consent and identity.
Representation Reformers	Electoral designers seeking institutions beyond territorial suffrage. Explore chambers, trustees or weighted representation.
Cautious Inclusionists	Reformers wanting evidence before wholesale franchise change. Support welfare rights first and reviewable enfranchisement later.

9 Deferrers — delay and delegation for reflection

Divided over: human deliberation versus delegated AI inquiry and authority.

GROUP	PUBLIC AIMS
Reflection First	Voters who put moral deliberation before irreversible action. Favour smaller early releases and serious inquiry commitments.
Council Delegators	Supporters of deliberation by aligned AI delegates. Want transparent delegation and appeal routes, not unlimited machine sovereignty.
Moral Realists	People who believe correct moral answers may be discoverable. Fund rigorous moral research and update as evidence improves.
Research Patrons	Financiers of long-term foundational inquiry. Back science that reduces uncertainty before cosmic-scale spending.
Wait-and-See Centrists	Uncommitted voters suspicious of rapid institutional commitments. Prefer reversible pilots and clear reporting.
Philosophers' Bloc	Academic and public communities in normative debate. Demand pluralistic argument; resist treating forecasts as moral verdicts.
Verification Hawks	Citizens sceptical of unverifiable AI guarantees. Back independent audits, constrained delegation and adversarial safety reviews.
Slow Constitutionalists	Supporters of durable constitutional procedure. Favour high thresholds, staged amendments and protection against deadline crises.

GROUP	PUBLIC AIMS
Arbiter Reliants	People who rely on consistent legal administration. Value precedent and transparent adjudication; distrust personalised exceptions.
Uncertainty Hedgers	Groups prioritising resilience across very different futures. Prefer diversified investments and reserves over one irreversible bet.

10 How groups behave

- Support moves with enacted policy, welfare and legal conditions, world events, press coverage and organised advocacy.
- Groups can endorse, withhold support, split, bargain or change priorities when the world changes — but not without a reason such as new leadership, incentives or evidence.
- Close scores split a group's support between parties; regions draw on different mixtures of groups, so a regional campaign is a different campaign.
- Moderators publish noisy *family-level* polling each term. Each party may commission two *subgroup* polls per term.
- A promise to a family is not a guarantee of its votes.

11 Wider currents

Earth politics continues beside the treaty: nations still govern domestic law and the Grand Bargain still binds. With welfare no longer tied to wages, the old arguments over ownership have moved to who controls self-reproducing industry and cosmic claims.

Illustrative. The World Bible names no such movements. Most voters belong to one group and sympathise with several currents. Currents play no part in election results, which score groups only on the five axes, and say nothing about any group's hidden loyalties.

CURRENT	OUTLOOK	OFTEN FOUND AMONG
Treaty Federalists	Treat Geneva as the first organ of a future world polity; want the Assembly's authority and franchise to grow.	Assembly Loyalists, Universal Franchise, Representation Reformers
Sovereigntists	Hold that legitimacy stays with nations; read the treaty narrowly and guard national probe programmes and holdings.	Probe Lobbyists, Industrial Expanders, Claim-First Loyalists

CURRENT	OUTLOOK	OFTEN FOUND AMONG
Cosmic Communists	Would abolish private title to cosmic resources outright; split between democratic planning through the Assembly and planning by machine.	Shared-Sky Advocates, Infrastructure Planners, Council Delegators
Dividend Socialists	Won the citizen dividend; now want a public share of self-reproducing industry within a mixed economy.	Equal-Share Traders, Mutual Benefit Pools, Public Works Builders
Title Liberals	See individual, transferable title as the guarantee of freedom from states and machines alike.	Homestead Migrants, Open-Exchange Holders, Private Ventures
Commune Anarchists	Want distant settlements free of any sovereign, held in common by the people who live there.	Frontier Pioneers, Community Holders, Minimal-Footprint Colonists
Market Anarchists	Want title and contract without states, enforced by private arbitration.	Frontier Pioneers, Open-Exchange Holders, Share Speculators
Abundance Movement	Treat growth as the moral project; every year of delay is a cost.	Speed Pragmatists, Rapid Distributors, Risk Acceptors
Green Restraint	Carry the conservation ethic past Earth; value unmodified places for their own sake.	Wilderness Advocates, Preserve Keepers, Ecological Guardians
Faith and Tradition	Defend family, lineage and inherited places; divided over whether digital and emulated people are persons.	Heritage Protectors, Kin Holders, Legacy Builders
Developmentalists	Put material access and a fair regional share ahead of long reflection.	Regional Commons, Civic Councils, Homestead Migrants
Personhood Movement	Extend rights and the vote to digital minds, emulations and future people.	Digital Rights Advocates, Sentience Advocates, Later-Generation Advocates
Humanist Sceptics	Insist that humans govern and that machine guarantees be verified, not trusted.	Verification Hawks, Philosophers' Bloc, Slow Constitutionalists
Trusteeship Idealists	Believe aligned AI delegates can deliberate better than electorates and want hard questions handed to them.	Council Delegators, Moral Realists, Long-Term Trustees

12 What is not published

The groups' salience weights, loyalty, turnout, regional weights and the simulation's random draws stay in the moderators' model. Strategy should be intelligible from public information, not reverse-engineered from hidden numbers. These descriptions are segments of a simulated electorate, not real organisations, and

none is affiliated automatically with any party. See also the Public Electorate Reference and the six party guides.
